Thales of Miletus - Wikipedia -
In physics, spacetime is any
mathematical model that fuses the
three dimensions of space and the
one dimension of time into a
single four-dimensional
continuum. Spacetime diagrams
can be used to visualize
relativistic effects such as why
different observers perceive
where and when events occur..
Until the turn of the 20th century,

harmonic oscillators are vibrating
systems for which the amplitude
of vibration decreases over time.
Since nearly all physical systems
involve considerations such as air
resistance, friction, and
intermolecular forces where
energy in the system is lost to
heat or sound, accounting for
damping is important in realistic
oscillatory systems. Damped
